
crewless vessel, after denial
memory-encrypted execution domain
A_{cpi} execution
working memory discarded
secure element
PUF · RBG · pk_r
K_e zeroised at denial
external storage
$Enc(A_{cpi})$
$W = Wrap_{K_e}(K_w)$
$RC = Enc_{pk_r}(K_e \| epoch)$
inert without K_e
navigation kernel — positioning, steering, propulsion, distress
denial does not reach it; holds a minimum-risk condition
M1 request
token + capsule opening
ashore
ROC
class
owner
escrow
flag
t of n, organisationally separated
$\tau = Sig_{t-of-n}(h_{puf} \| \nu \| c+1 \| h_{safe} \| h_{att} \| h_{cust})$
$+ Enc_{pk_{eph}}(K_e \| epoch)$
custody attestation A_{cust} — port state or flag
a second, disjoint authority; $h_{cust} = H(A_{cust})$
R0 admission
R1 re-attestation
R2 supervised nav
R3 full capability
denial
attestation mismatch, or the safe-state predicate lapsing at any stage, returns the platform to denial
each stage is admitted only while that predicate holds
